

AluCurve

Modern, Professional styling

Made from 2mm rigidised aluminium AluCurve is constructed without an edge corner weld to prevent seam splitting.

AluCurve is the ideal balance between style and protection. The tough pre pressed corners add extra strength and exceptional resistance to drop damage.

Every aspect of the AluCurve case has been given very careful consideration. Recessed catches & handles, indents for stacking and radius edges are to name but a few of its features.

Why not personalise or brand your case with colour coded 'smarties' making identification simple. The 'smarties' fit in the pressed corners and allow you to spot your case in a crowd or colour code equipment types.

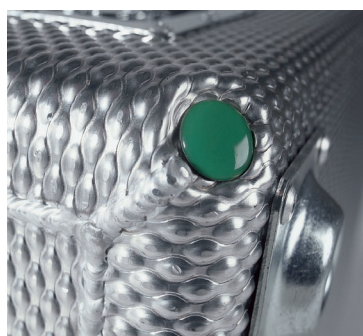

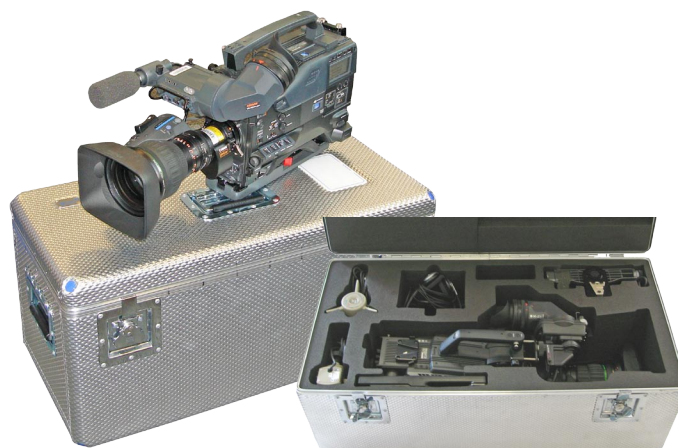

Maximum Protection

- The CP designed lid/body seal (with integral neoprene rubber gasket) protects contents against rain, dirt, dust and other environmental hazards.
- All-welded construction with sealed rivets used on handles.
- Low profile, full-length steel hinge (aluminium hinge also available) together with fully recessed, sprung chrome plated handles and cam-operated butterfly catches (both with waterproof gasket) are supplied as standard.
- Webbing lid-stays keep lid open in upright position.
- Flush-fitting, colour-coded "Smarties" are fixed into the corner indents, providing colour coding and keeping the case streamlined and safer to carry.
- Stacking is made quick and easy by simple top and bottom body indents/outdents with a non-scratch rubber foot.

Can be customised to your needs with

- Padlockable catches.
- Choice of surface finishes and colours.
- For extra heavy contents and easy manoeuvrability, low profile, recessed 70mm wheels and integral retractable handle (reinforced internally with stainless steel) can be incorporated.
- Write on/ wipe off labels, indented into the case body, reduce scratching and protect the label.
- Other label options include:
 - Surface mounted, engraved, etched, stencilled or screen-printed labels.
 - Swing labels, standard information/ warning signs, bar coding or even using your own label are also available and enhance your corporate identity.

Protective Packaging

The vital constituent of protective packaging is the foam that surrounds and supports the item requiring protection.

Our capabilities to design, develop and manufacture the most effective foam support or pack for each individual application involves processes such as punching, stamping, CNC routing, hand forming and sculpturing.

Our many years of experience are brought to bear when advising customers on equipment support, layout and requisite attenuation against shock, impact and vibration.

AluWeld

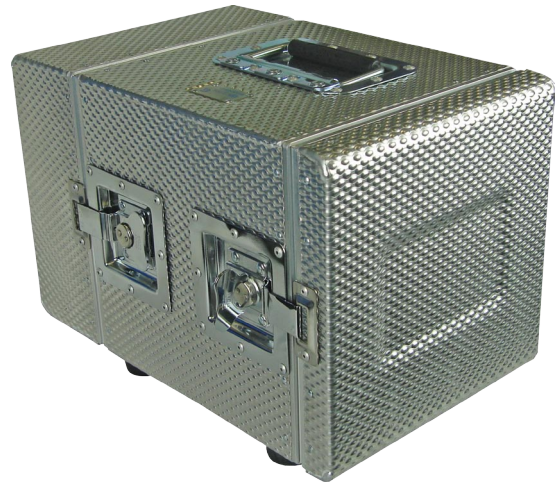

Quality-built cases in the traditional design

High-tensile aluminium is lighter than plywood, yet AluWeld cases meet the stringent US ATA300 Cat. I standard of a minimum 100 return air trips.

AluWeld resists the most arduous of climatic and environmental conditions. Seams and joints are robotically welded, making cases weatherproof to IP54.

The inter-locking lid/body seal (with integral neoprene rubber gasket) protect contents against rain, dirt, dust and other environmental hazards.

Each AluWeld is manufactured individually to meet your exact requirement. Some of the options available include:

Maximum Protection

Choice of recessed or surface-mounted locks, catches and handles

- Low, profile, recessed 70mm wheels and retractable handle (reinforced internally with stainless steel) can be attached to make cases with heavy contents easy and quick to move
- Choice of surface finishes: anodised or powder-coated RAL paint colours
- Padlockable catches
- Stacking options include:
 - Impact resistant nylon corners, which locate with each other for stacking and extra protection.
 - Interlocking lid indents for static stacking and storage.

Other label options include:

- Surface mounted, engraved, etched, stencilled or screen-printed labels.
- Swing labels, standard information/ warning signs, bar coding or even using your own label are also available and enhance your corporate identity.

AluWeld cases are made-to-measure.

The construction lends itself to intricate designs and applications, and is in use across a wide range of industries, including defence, broadcast
